# OUR MATERIALS

## MOULDED FIBRE

Sugarcane, bamboo, wheat and other plant fibres are rapidly renewable resources that can be pulped and moulded into a variety of shapes. The end products are sturdy yet compostable.

**Vanguard®**
Vanguard® products are EN 13432 and OK Compost Industrial and Home certified*. They also compost at lower temperatures, so they can go into the compost heap in your garden at home.

- Made from renewable & compostable resources
- For use with hot or cold foods
- Grease and cut resistant
- Oven, microwave and freezer safe

Moulded fibre products can be put in the freezer, although they are not airtight so freshness and freezer burn can become an issue if left there for too long.

* May not apply to each moulded fibre item. Please contact us for more information.

## PAPER & WOOD

Cellulose fibres from wood, fibre crops, waste paper or rags. Mixed with water and plant-based additives, pulp is the major raw material used in the industrial production of paper products.

**C/PAP**
Composites of paper and cardboard lined with compostable plastics (PLA) from plants.
We strive to offer FSC-labelled products wherever possible.

Paper products can be put in the freezer, although they are not airtight so freshness and freezer burn can become an issue if left there for too long.

**Wood**
Renewable, FSC® 100% certified birchwood.

- Made from renewable & compostable resources
- For use with hot or cold foods
- Grease resistant

## PLA

Polylactic Acid. Sugar and starches are extracted from plants and converted into a polymer, then made into a resin that can be converted or thermoformed into usable products.

**PLA**
Polylactic acid is a material made from starchy plants, like corn or sugarcane. It looks and feels like traditional plastic, but is compostable.

**CPLA**
CPLA is a crystallised form of PLA. Because PLA is not suitable for hot applications, CPLA is a useful alternative for products that require more heat resistance. CPLA is compostable just like PLA.

**RPLA** (N)
RPLA is a recycled form of PLA, recycled again from food packaging waste.

- Made from renewable & compostable resources
- For use with cold foods

PLA can become brittle when frozen, so we don't recommend putting these products in the freezer.

## RPET

Recycled polyethylene terephthalate (PET).
Made from post-consumer recycled materials that have been used, recycled and repurposed, meaning fewer virgin resources are required and less landfill waste is created.

These products incorporate the highest amount of post-consumer recycled material available without compromising performance.

- Made from recycled materials
- For use with hot or cold foods
- Grease resistant

RPET can become brittle when frozen, so we don't recommend putting these products in the freezer.

# DINNERWARE

**Plates and Bowls**
Renewable & compostable moulded fibre dinnerware is designed to be strong as well as grease and cut resistant. Sturdy and versatile, these plates and bowls work well for a wide variety of foods. They're the ideal alternative to traditional plastics or polystyrene, because they're made from reclaimed and rapidly renewable fibres.

**Dahlia™ Plates and Bowl**
Our Dahlia™ Dinnerware is made with a premium blend of moulded fibre and bamboo for a unique and undeniably green look. We've designed these plates and bowls in our signature leaf shape for that extra special touch.

# CUTLERY

**Wooden Cutlery**
Renewable wooden cutlery is a natural choice for your renewable dinnerware selection. Enjoy both hot and cold foods in comfort and style, for everything from soup to salad. These utensils won't warp, disintegrate or melt when used with piping hot dishes. Made from FSC® certified birchwood. The wrapped cutlery kit gives an additional level of hygiene and the paper wrapper is plastic-free and compostable.

**Moulded Fibre Cutlery**
Made from rapidly renewable resources like sugarcane, this cutlery is sturdy and compostable. Suitable for use with hot or cold foods.

**Folia™ Take-Out Containers**

We designed our patented Folia™ line to completely redefine the take-out and leftover experience. Innovative features include tear-away flaps for easier access to food and leak-resistant side flaps that prevent spills and hold condiments and cutlery. Available in a full array of shapes and sizes that satisfy a broad range of foodservice needs. Made from renewable and reclaimed moulded fibre.

# CLEAR GRAB & GO CONTAINERS

**Clear Grab & Go containers**
Renewable & compostable containers are a more sustainable choice for serving a variety of cold foods. Made from PLA or RPLA, a plant-based material, they are as strong and durable as their traditional counterparts, but they don't rely on oil-based plastics. These containers are renewable and EN 13432 compostable.

**Paper Food Bowls & Lids**
These round paper food bowls with PLA lining are suitable for a variety of hot and cold dishes such as gourmet salads, ramen, steaming curries or fresh poke bowls. The paper lids for hot dishes have ventilation holes. For optimal presentation and visibility, use the PLA or RPET lid that provides a good view of the dish.

# PAPER WRAPS

**Paper Eco Wraps**
The benefits speak for themselves: less packaging material due to a low grammage compared to clamshells, bags and other alternatives. The PEFC-certified paper with grease and moisture resistant properties (without relying on conventional PFAS*) is 98% compostable. The printing with food-safe water-based ink ensures a food-safe product. These multi-functional sheets complement any product line-up. Use them to wrap burgers and sandwiches, line baskets, weigh food, and more.

**PAPER WRAPS**
**BU-EWW0001R** eco wrap, red

# Put waste to work™

You eat. You breathe. You live.
You create waste.
We get it, you're human.
Waste is a human creation.
And it doesn't have to go to waste.
It can be turned into something valuable.
So let's start to rethink the way we dispose of food waste.
